Summary

Final-year Information Technology undergraduate with hands-on experience in **AI/ML, data analysis, digital tooling, and AI-human collaboration**. Built AI-powered applications using Python, PyTorch, scikit-learn, Gemini APIs, and REST APIs. Demonstrated ownership through end-to-end projects and **7+ merged open-source contributions** involving maintainer feedback, debugging, and testing.

Experience

Open Source Contributor **Jan 2026 – May 2026**
JupyterLab & OpenSRE (Tracer) *Remote*
- Shipped a file-browser loading-animation feature to **JupyterLab** (**PR #18855**) in TypeScript; reviewed and merged by a core maintainer into the upstream codebase.
- Debugged and fixed failing Windows shell test commands in **OpenSRE's CI pipeline** (**PR #1755**), restoring cross-platform test reliability for an AI-driven SRE-agent toolkit.
- Completed **7+ merged pull requests** across production open-source repositories, incorporating maintainer feedback across UI, CI/test infrastructure, debugging, and developer tooling. View All Merged PRs

Data Science Trainee (Summer Training Program) **Jun 2025 – Aug 2025**
Bharati Vidyapeeth's College of Engineering *New Delhi*
- Developed **Three-D** | GitHub, a computer-vision system using **MiDaS** to generate per-pixel depth maps and 3D representations from a single 2D image for visualization and analysis.

Projects

INE Price Tracker | *React, Node.js, Express, Playwright, Supabase (PostgreSQL)* | GitHub | Live **Sep 2026**
- Built a full-stack data collection and monitoring tool using **Playwright**, Express REST APIs, and Supabase PostgreSQL to track product prices and stock from dynamically rendered storefronts.
- Automated scheduled data collection with authenticated triggers, **3-attempt retries**, logging, and historical storage; developed a React dashboard for product search, price-history analysis, scrape logs, and CSV export.

RazorSave (Fintech Platform) | *React, FastAPI, Razorpay SDK, scikit-learn* | GitHub | Demo **Aug 2026**
- Built a full-stack savings platform that rounds up everyday payments through the **Razorpay API**, with server-side signature verification and idempotent checkout handling.
- Trained **Random Forest** models on **10,000+ transaction records** to forecast savings for the next 30 days and predict the probability of reaching a savings goal.
- Integrated the **Gemini API** to turn ML results into per-user spending profiles, trends, and recommendations.

YT Vision Explainer | *JS, Chrome API, Gemini Vision API, Shadow DOM* | GitHub | Demo **May 2026**
- Designed an **AI-powered digital tool** using Gemini Vision and Chrome APIs to capture YouTube frames and generate contextual explanations of on-screen programming content.
- Integrated AI into an interactive browser workflow supporting **AI-human collaboration**; used Shadow DOM for UI isolation and achieved approximately **1.5–2s** frame-to-explanation latency.

Achievements

Top 5 Finalist – Smart Bin IoT System | *Arduino, Flask, IoT* | GitHub | Demo **Aug 2025**
- Prototyped a real-time data-collection system with ESP32 sensors and a **Flask API** to detect bin capacity and trigger operational alerts; placed **Top 5 of 300 teams** at a national hackathon.

Education

Bachelor of Information Technology **Aug 2023 – May 2027**
Bharati Vidyapeeth's College of Engineering, New Delhi *CGPA: 8.9*

Class XII (CBSE) **Mar 2022**
Rotary Public School *87%*

Skills

AI & Data: Machine Learning, NLP, Generative AI, Semantic Similarity, Computer Vision, PyTorch, SBERT, scikit-learn, Pandas, NumPy
AI Tools & APIs: Gemini API, Gemini Vision API, Hugging Face, LangGraph, REST APIs, AI/LLM Integration
Programming & Development: Python, JavaScript, TypeScript, C/C++, SQL, FastAPI, Flask, Django, Node.js, Express, React, PostgreSQL, Git, GitHub, GitHub Actions, Docker, Playwright, Chrome Extension API, Software Testing
DSA: LeetCode | GeeksforGeeks (Data Structures & Algorithms)
